

Wilberforce Sedem Haibor

SENIOR SOFTWARE ENGINEER

Payments · Financial Infrastructure · Distributed Systems

Accra, Ghana · wmaggickk@gmail.com · +233 24 591 0775

wmaggick.com · github.com/maggickkw · linkedin.com/in/wilberforce-sedem-haibor-59210120b

PROFILE

Software engineer specialising in payment infrastructure, transaction processing and financial systems. Built payment gateways, merchant checkout, lending platforms and settlement middleware in production, in Go, Rust and PHP, together with the APIs and third-party integrations around them. Work centred on transactional correctness, reliability and failure handling, in systems where financial state has to stay consistent under real operating conditions.

TECHNICAL SKILLS

Financial Systems	Payment processing, transaction processing, settlement, merchant checkout, loan origination, payment integrations
Architecture	Distributed systems, microservices, Clean Architecture, fault tolerance, API design
Languages	Go, Rust, Elixir, PHP, TypeScript / JavaScript, Python, SQL
Backend & APIs	Go Fiber, Gin, Laravel, Webman, Node.js, Express, Django REST, gRPC, WebSockets
Data	PostgreSQL, MySQL, Redis, MongoDB, ScyllaDB
Infrastructure	Linux, Docker, Git, CI/CD
Frontend	React, React Native, Next.js, Tailwind CSS

EXPERIENCE

Senior Software Engineer <i>EasyPeasy Fluent AG</i>	Jan 2026 – Present <i>Zug, Switzerland</i>
- Redesigned the platform's money flows across tutor payments, invoicing and lesson rescheduling, closing out a class of commission miscalculation and the recurring support load it generated. - Introduced a platform-wide audit layer capturing sensitive administrative actions transparently, giving Operations full traceability without instrumenting every feature individually. - Built CSV-driven migration tooling with deduplication and safeguards, so account managers hand over customer cohorts at scale instead of reconciling records by hand. - Deliver full-stack features end to end across a PHP backend and TypeScript / React frontends serving students, tutors, administrators and sales.	
Senior Software Engineer <i>Edusogno</i>	Oct 2025 – Dec 2025 <i>Milan, Italy</i>
- Architected and shipped a decoupling microservice that isolated the API backend from the monolith, cutting inter-system dependencies and opening the path to independent scaling and deployment. - Designed APIs in Go and Laravel behind real-time scheduling, progress tracking and assessment, together with the dashboard analytics built on top of them. - Implemented authentication, role-based authorisation and validation across the platform. - Cut query and page load times on both the backend and the frontend to keep the product responsive for users spread across several geographies.	
Technical Manager <i>AutomatedPros · Freelance</i>	Aug 2025 – May 2026 <i>Dubai, UAE</i>
- Led the mobile team's transition from Flutter to React Native, training engineers through debugging, state management and architecture decisions to ship a complete kitchen and ordering application. - Set and enforced coding standards and development workflow across the engineering team, improving delivery speed and consistency. - Ran technical interviews and architecture evaluations for prospective React.js and React Native hires. - Reviewed and refactored existing codebases for performance and maintainability.	

Software Engineer

Nov 2024 – Jan 2026

PaySwitch Company Limited · Payment processor serving banks and merchants

Accra, Ghana

- Designed and built a Loan Management System in Go, automating origination, credit decisioning and portfolio management, and powering the "Pick and Pay Later" device financing product.
- Owned the settlement middleware API in Rust, the integration point between transaction processing and the downstream financial systems it has to reconcile against.
- Rebuilt the external checkout system on Webman (PHP) for lower latency and higher throughput on merchant transactions.
- Engineered internal APIs consumed by other services, supporting real-time data flow and automation across the platform.
- Delivered a full-stack School Management System in Go and Next.js, in active use by partner institutions.

Full-Stack Developer

Jan 2024 – Mar 2025

IHDM · Contract

Abuja, Nigeria

- Built and ran the IHDM and IGPCM student portals for records management and exam registration, replacing manual administration with automated workflows.

Software Engineer

Jul 2023 – May 2026

Luupli · Contract

London, United Kingdom

- Contributed to the technical architecture and delivery of the Luupli mobile application and its web surfaces across the full development lifecycle.
- Built responsive interfaces in React.js and React Native, and a reusable component library that shortened delivery time on later features.
- Diagnosed and resolved critical production issues, and optimised code paths to cut load times.

Volunteer Staff

Jul 2023 – Feb 2024

Code The Dream

United States · Remote

- Mentored aspiring developers in React.js and JavaScript through code review, pairing and troubleshooting, and taught engineering best practice.

Software Engineering Technician

Sep 2018 – Oct 2020

National Identification Authority

Accra, Ghana

- Supported the nationwide Ghana Card mass registration, resolving system and hardware faults to keep registration throughput up across the roll-out.

SELECTED PROJECTS

Kingsway Foods Backend · Go, Fiber, PostgreSQL, Redis, gRPC, WebSockets

- Production food delivery backend on Clean Architecture, handling real-time logistics, wallet balances, gamification and multi-role operations at scale.

TinyTag · React Native, Node.js, TypeScript, MongoDB

- Offline-first child registration platform built for a UNICEF contest, collecting data in low-connectivity regions and syncing reliably once a connection returns.

EDUCATION

BSc Computer Science, Ghana Institute of Management and Public Administration (GIMPA)

2023 – Present

BSc Agricultural Science, University of Ghana

2013 – 2017
